

Get a Built-In Stylus and Lightning-Fast 5G With the Moto G Stylus 5G at Boost Mobile

Connected to the Boost 5G network, the new moto g stylus 5G - 2023 unleashes creativity at the fastest possible speeds

Boost Mobile customers receive an elevated smartphone experience with the all-new moto g stylus 5G. With a built-in stylus and access to the Boost 5G network¹, users can maximize their creativity and productivity. Plus, now through August 24, customers who switch their service to Boost Mobile at a [local store](#) can get the moto g stylus 5G on us.

The smartphone's built-in stylus allows customers to jot notes, edit photos, sketch artwork, copy and paste text, mark up screenshots and navigate with ease. The stylus works seamlessly with the Moto Note app, and customers can animate hand-drawn messages and share them across their favorite social media apps.

"With the moto g stylus 5G, nothing keeps our customers from taking a quick note whenever inspiration strikes – without even unlocking their phones," said Mike Kelly, group president, Retail Wireless, DISH Wireless. "Combining so many fan-favorite features with the power of our Boost 5G network, the moto g stylus 5G levels-up the wireless experience for our customers while delivering a meaningful value."

The Snapdragon® 6 Gen 1 processor in the moto g stylus 5G maximizes 5G connectivity, allowing customers to download their favorite shows in seconds, stream with virtually no buffering and video chat without lag. The moto g stylus 5G is further powered by the Boost 5G network combined with our 5G partner networks, offering Boost Mobile customers fast and reliable coverage now matter where they are.

Plus, for gamers and photographers the edge-to-edge 6.6-inch 120Hz FHD+ display delivers smooth gaming and video on top of immersive multidimensional Dolby Atmos® sound. Capture brilliant photos and video with a 50MP camera system, and let AI features like Auto Smile Capture, Shot Optimization, and Smart Composition take pictures to the next level. Dual Capture mode turns a single person into a camera crew by simultaneously recording from rear and selfie cameras, and built-in Quad Pixel technology greatly enhances photos taken in lower light. Gear up for uninterrupted fun with a 5,000 mAh battery, providing up to two days of streaming,

¹ The Boost 5G network is available only in select markets.

² All battery life claims are approximate and based on the median user tested across a mixed use profile (which includes both usage and standby time) under optimal network conditions. Actual battery performance varies and depends on many factors, including signal strength, network and device settings, temperature, battery condition, and usage patterns.
